

Fibernet at a Glance

As one of Utah's IT pioneers, Fibernet first established itself as the resident expert in Internet solutions in 1994. In the years to follow, we continued to build upon a reputation of expertise with the creation of our national brand, NetHosting, in 1998, and with the 2002 construction of our Tier IV data center. Our suite of services also expanded to include colocation, dedicated hosting, and enterprise cloud computing.

Record-breaking connections.

Fibernet is the *only* carrier neutral facility to house all eight of Utah's major fiber backbone providers. So many connections give us the leeway to tailor one-of-a-kind solutions for our clients' scalability and growth needs, while allowing for unprecedented convenience and savings.

Obsessively redundant.

Power to our data center is protected by multiple Liebert UPSs and Cummins diesel generators. Through blackouts, brownouts, and lightning strikes, these systems have never failed to provide uninterrupted power to our customers' data. That's our definition of 100% uptime.

First in certification and accreditation.

We were the first facility in Utah to receive third-party certification for PCI compliance. As a provider, our security certifications cover the bases for our clients as they pursue their own industry-specific accreditations, not only for PCI, but for SSAE 16 and HIPAA as well. This will save you thousands of dollars, which you can then put straight back into your business.

Home-grown and global.

No matter what, we are never further than a phone call, chat, or lunch visit away from our clients. We are dedicated to preserving that personal feel which too many major providers tend to lose with growth.

Dedicated Expert™ support.

We give our customers five routes of access to dedicated, always-there support: phone, chat, email, in-office, and ticketing. In all of our interactions, we diligently maintain 4.5/5 stars in our customer feedback reports.

"Our experience with Fibernet's various teams have further increased our desire to move more infrastructure to Fibernet; knowing that when we bring large clients for on-site visits, they will be given more attention than many other data centers provide."

-Brandon, MoneyDesktop

FIBERNET

> Company Stats

Fibernet is largely recognized for its longevity and stability as it has expanded its products, services, and facilities over the last two decades.

- » Founded in 1994
- » First facility in Utah to achieve PCI certification
